

# BEHAVIORAL HEALTH MATTERS

**Social isolation and loneliness** are significant risk factors for:

internalizing &  
externalizing  
behaviors

difficulty forming  
connected &  
stable  
relationships

adjustment difficulties

poorer physical health

challenges with  
social &  
emotional  
development

**Depression and anxiety** symptoms are risk factors for:

decrease in  
academic  
performance

increase in school absenteeism or drop out rates

harm to self or others

poor physical health

bullying or  
victimization

# CHILDREN AND FAMILIES

## Rapid Assessment of Pandemic Impact on Development – Early Childhood

- Ongoing, nationally representative survey of households with children 0-5
- Single parents, lower income families, and parents of children with special needs are experiencing very high rates of stress (RAPID-EC, 2020, Nov. 11 and Dec. 17)
- Overall, for all families, there has been a decline in preventive care and vaccines (RAPID-EC, 2020, Oct. 13).
- Caregivers experiencing more financial and material hardship also have more emotional distress and they report that their children have more emotional distress (RAPID-EC, 2020, Jul. 20).

# CHALLENGES

- More than 20% of students experienced signs of anxiety & depression after one month in quarantine (Xie et. al., 2020).
- 20% of youth are typically anticipated to demonstrate a social-emotional or behavioral (SEB) concern at some point during their school years.
- Rates are expected to double or triple after COVID.
- NASP recommends focusing on class-/school-wide intervention approaches to support student SEB functioning until the child can adjust back to school.

# OPPORTUNITIES

## School Connections Matter

**School Connectedness:** The belief by students that adults and peers in the school care about their learning as well as about them as individuals. School connections decrease the risk of:

- Substance abuse
- School absenteeism
- Early sexual initiation
- Violence
- Risk of unintentional injury
- Emotional distress
- Disordered eating
- Suicidal ideation and attempts to self-harm

(CDC, 2009)

# Relationships Matter

## Teacher-Student Relationships

- Influence social and emotional development
- Impact prosocial and aggressive behaviors
- Impact school success
- Moderates isolation
- Provides a sensitive environment to increase identification of students in need

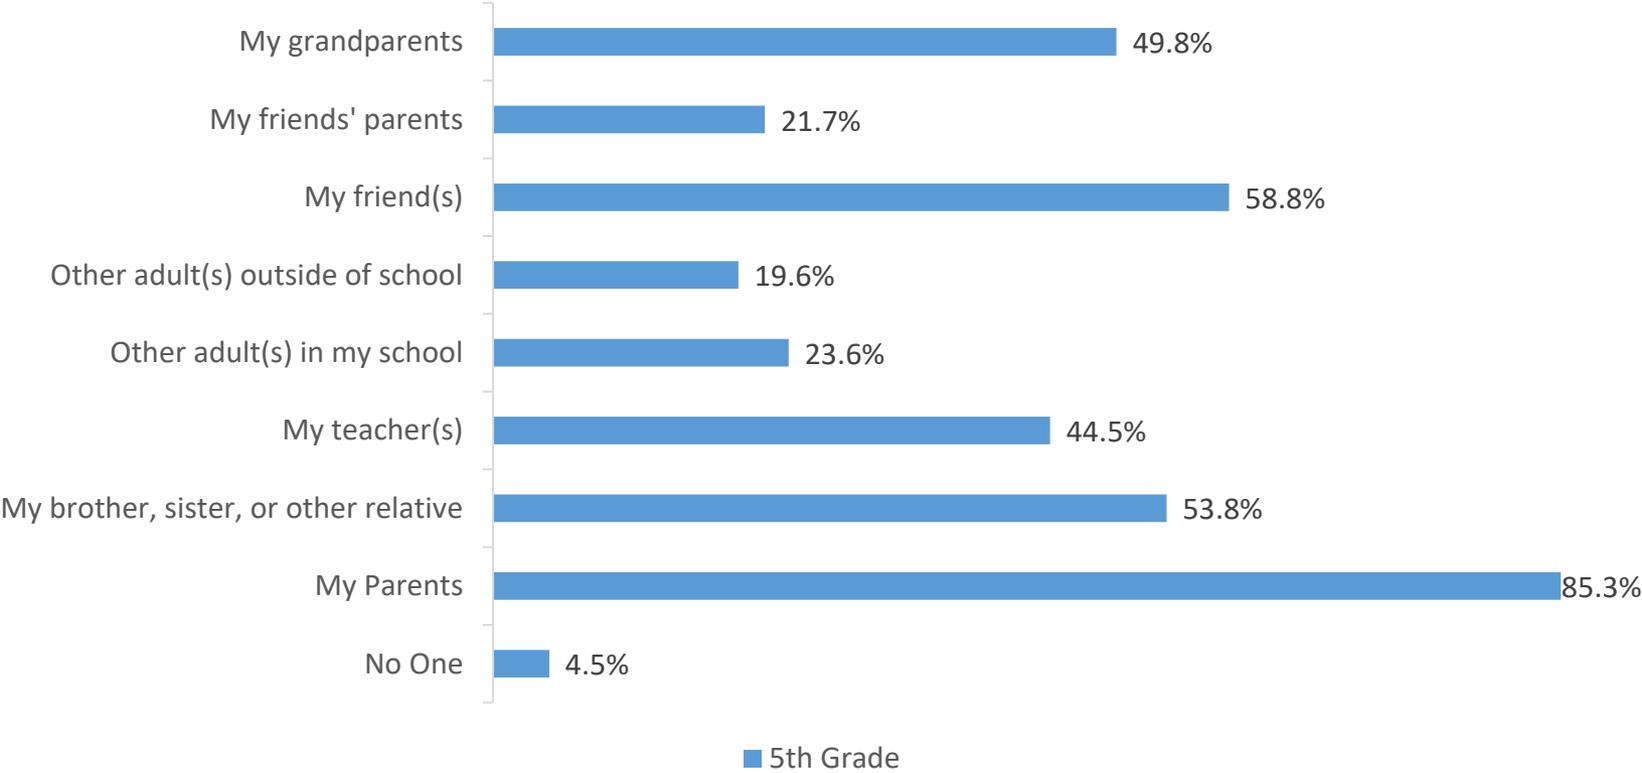

## Friendships

- Deter victimization
- Reduce Depression
- Reduce adjustment problems
- Decrease disruptive behaviors and conduct disorders

# Which of the following people would you say give you a lot of support and encouragement (mark all that apply)?

# MULTI-TIERED SYSTEMS OF SUPPORT

# INTEGRATED MTSS: WSCC

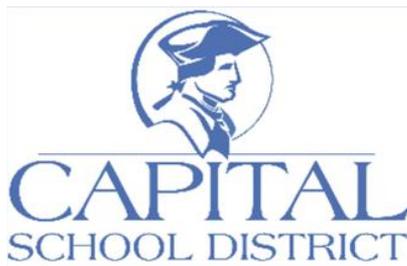

# SAMHSA PROJECT AWARE GRANT

Project DeLAWARE is a collaborative effort between the Delaware Dept. of Education, the Dept. of Prevention and Behavioral Health Services, The Delaware PBS Project (UD), the Center for Drug and Health Studies (UD), and three local school districts – Colonial School District, Capital School District, and Indian River School District. This project is funded through a 5-year federal grant from SAMHSA.

Project DeLAWARE was designed to integrate mental health supports into the existing Multi-Tiered System of Support within the schools and strengthen/create relationships with outside providers. Our project is using evidence-based mental health services and screening tools to assess the needs of our youth along with a reduce the stigma social media campaign.

Advancing Wellness and Resiliency in Education

Others might feel or act different from you. Instead of judging them or excluding them, be patient, be kind, and don't be afraid to have a conversation. You never know who might be struggling with a mental health challenge. Choose to save a life.

Learn more at [MentalHealthDE.com](https://www.MentalHealthDE.com).

Mental health challenges aren't a choice. But talking about them is. When we talk and listen, we can overcome the shame, fear, and guilt that prevent those struggling from getting help. Start the conversation. Choose to save a life.
